Car Parking Tower

♦ System Overview
An integrated controller is applied to control of the solid parking place for contractors. C2 reads data of ID card for a parking-place contractor check, and if normal, it will control entering and leaving the garage based on ID data. C2 controls the motor at the time of entering/leaving the garage. C2 is also possible to communicate with the log center, and to monitor an operation state from remote control center.

♦ System Configuration

♦ Features
(1) Compact configuration only C2 and I/O.
(2) The rich interface functions of C2.
(3) Integration of generalization management of data and control is possible by C2 controller.
